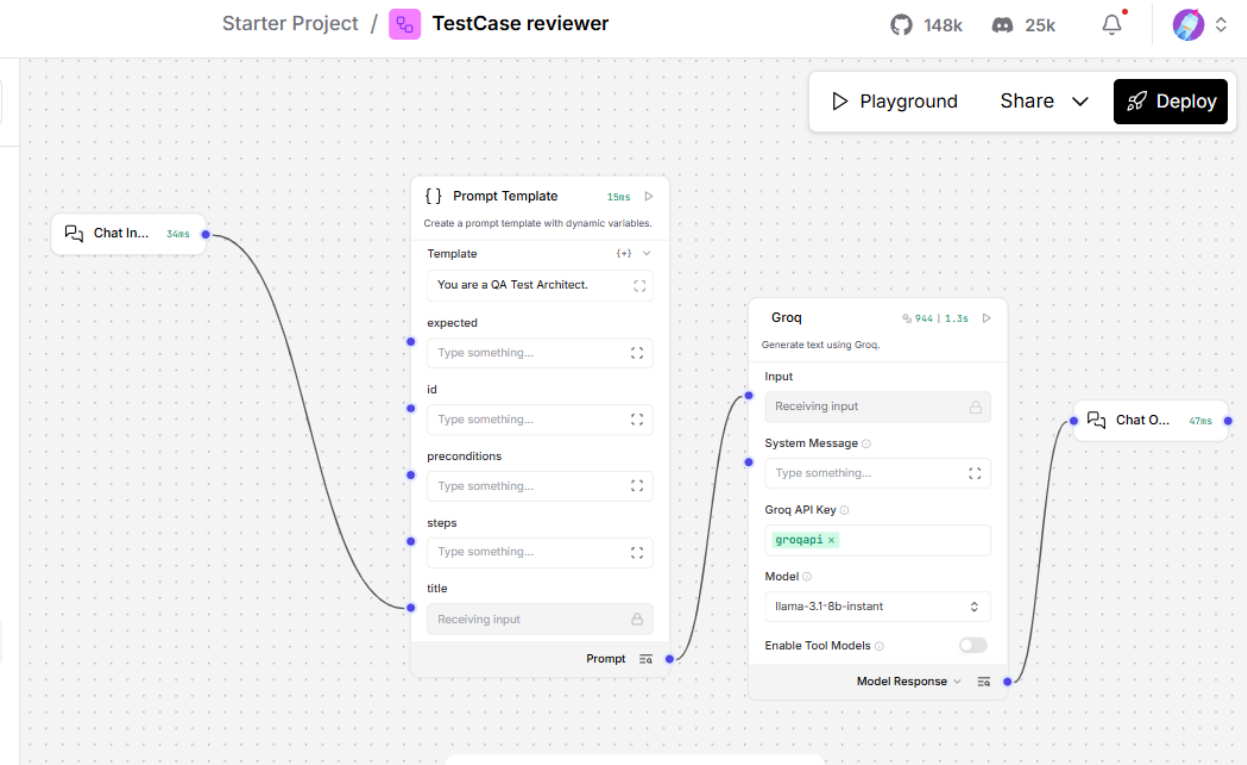
Test Review Assignment for Langflow



Reviewer:

Default Session

- Logging out

However, the test case is missing the following:

- A clear description of the expected results for each step
- A clear definition of the sample size for the Document Subtype (Appendix 1 is mentioned, but its content is not provided)
- A clear definition of the precondition for the test case

2. Clarity: 7/10
The test case is written in a clear and concise manner, but there are some areas that can be improved:

- Some steps are quite long and could be broken down into smaller, more manageable steps
- The expected results are not clearly defined for each step
- The use of abbreviations (e.g. "TC-001") and acronyms (e.g. "Veeva Vault RIM") may not be familiar to all readers

Evaluation of Test Case: TC-0011. Completeness: 8/10 The test case covers the following aspects:

- Login to Veeva Vault Quality
- Navigation to Home >> Artwork Library
- Filtering by Document Type
- Display of Subtypes and document count
- Selection of a specific subtype
- Display of documents under the selected subtype
- Logging out

However, the test case is missing the following:

- A clear description of the expected results for each step
- A clear definition of the sample size for the Document Subtype (Appendix 1 is mentioned, but its content is not provided)
- A clear definition of the precondition for the test case

2. Clarity: 7/10 The test case is written in a clear and concise manner, but there are some areas that can be improved:

- Some steps are quite long and could be broken down into smaller, more manageable steps
- The expected results are not clearly defined for each step
- The use of abbreviations (e.g. "TC-001") and acronyms (e.g. "Veeva Vault RIM") may not be familiar to all readers

3. Test Design Best Practices: 6/10 The test case follows some best practices, but there are areas for improvement:

- The test case is not clearly aligned with any specific testing objective or goal
- There is no clear definition of the test data or the environment in which the test will be executed
- The test case does not include any negative testing or error handling scenarios
- The test case does not include any verification of the expected results

Recommendations:

- Break down long steps into smaller, more manageable steps
- Clearly define the expected results for each step
- Provide a clear definition of the sample size for the Document Subtype
- Define the precondition for the test case
- Align the test case with a specific testing objective or goal
- Include negative testing or error handling scenarios
- Include verification of the expected results

Revised Test Case:ID: TC-001 Title: Review Document Subtypes in Artwork Library**Preconditions:**

- The user has a valid login credential for Veeva Vault Quality
- The user has access to the Artwork Library

Steps:

1. Login to Veeva Vault Quality using valid credentials
2. Navigate to Home >> Artwork Library
3. Apply filter (in the left pane) to 'Document Type'
4. Select the 'Document Type' as 'Artwork'
5. Verify that the list of All 'Subtypes' and the count of documents in that subtype are displayed in the left pane
6. Click on the subtype 'Blister Label' from the left pane
7. Verify that all the documents under the subtype are displayed
8. Refer to Appendix 1 and note the sample size for the Document Subtype
9. Log out from Veeva Vault Quality

Expected Results:

- The names of the Document Subtypes with the count of documents under the subtype are displayed in the left pane
- All the documents under the selected subtype are displayed
- The sample size for the Document Subtype is correctly noted
